

Home phototherapy involves several coordinated steps to ensure the best care for your infant. Once we receive the order from your provider the process begins.

- ☀️ First, you'll receive a phone call from our office with an approximate time for the registered nurse's arrival.
- ☀️ Before the nurse arrives, you'll receive a text message prompting you to sign consents online and upload insurance information. This is a necessary step for treatment.
- ☀️ On the setup day, the nurse will arrive at your home, explain how to use the phototherapy equipment and review what to expect during treatment.
- ☀️ On the following days, the nurse will visit to take vital signs, perform a complete newborn assessment, check your infant's weight and obtain bilirubin lab work.
- ☀️ This lab work will be processed by a nearby hospital laboratory. The results will be communicated to your pediatrician, who will provide further care instructions based on the results.
